

New company provides high quality roads in Georgia

LTD Autogzatechnika was established in September 2017 as a provider of road construction and road rehabilitation services. Improving the quality of roads in Georgia is an important element in supporting the expansion of trade between Georgia and European countries. As more producers of a wide variety of goods in Georgia are investing in the alignment with EU Directives and looking forward to expanding their deliveries to European markets, they increasingly depend on smooth transportation routes. Road transport is a frequent choice. Against this background, the company Autogzatechnika supports the transport sector by constructing and rehabilitating roads.

The company invested in a range of equipment, including a track loader, a self-leveling planer, an articulate tandem roller as well as transportation vehicles. The new equipment consumes less fuel than older equipment used in the road building processes and the new vehicles offer comfortable and safe working conditions for the operators.

After successfully completing the project verification process the company received 15% of the loan amount as a cash-back grant, which is funded under the EU4Business initiative of the European Union.

With the investment, the company now meets a wide variety of European standards, including:

- Regulation (EC) N. 661/2009 of the European Parliament and of the Council concerning type- approval requirements for the general safety of motor vehicles, their trailers and systems, components and separate technical units intended therefore
- Directive 2006/42/EC on machinery, and amending Directive 95/16/EC

Loan Amount € 1,011,753

Grant amount € 151,763

Invested in Road building equipment

EU Directives met EU standards for general safety of motor vehicles and machinery

Primary Energy Savings: 3,555 MWh/year

GHG Savings: 991 t CO2/year

Energy Saving Ratio: 28.5%
