

Greener Paper Products

Neoprint LLC has been providing customers in Georgia, Armenia and Azerbaijan with high quality printing products since 2009. Located in the Mtskheta-Mtianeti region of Georgia and a 2,200 m² production facility, the company produces carton and corrugated paper products used in Buildings (such as paper sandwich panels) and for packaging.

A main focus of Neoprint is on green production. The production processes are set up to minimize any waste, using very modern production lines, the raw materials are almost exclusively paper wastes collected from other businesses and thereby considerably reducing the need for imported carton and other paper materials. As a result, the company prides itself in recycling ten thousand tonnes of wastepaper per year and substituting 7,200 tonnes of imports.

Taking its dedication to green production one step further, Neoprint invested in a Solar PV installation to reduce its energy consumption and carbon emissions. Apart from the positive effect on the company's environmental impact, the subsequent reduction in energy costs also contributes to its competitiveness in Georgia and abroad.

After the successful implementation and verification of this project, the company received 15% of the loan value as a grant incentive, funded under the EU4Business initiative of the European Union.

With the implementation of this project, the company now meets wide variety of European standards, including:

- Low Voltage and Electromagnetic Compatibility Directives LVD 2014/35/EU and EMC 2014/30/EU
- Renewable Energy Directive 2009/28/EC

Loan Amount € 129,619

Grant amount € 11,582

Invested in Solar PV

EU Directives met EU Directives met: Renewable Energy & Electromagnetic compatibility

Energy Savings and GHG reduction 388 MWh/y
